31 January 1996

Test Status

- **Ir1 Test Execution Summary:**

- Overall 192 Test Cases defined in the Ir1 Test Plan and Procedures (DID 322/414) were successfully executed
- Many of these tests were regression tested resulting in a significantly higher number of test executions
- All test drivers, simulators, scripts and data are placed under EDF CM
- Original thread metrics were front loaded
- Newly revised test schedule replanned these activities w/o delaying CSR
- Moved CSR date up by one week
- Reasons for diversion from original test schedule and metrics:
 - Porting of code to target platforms (misc. vendor issues wrt library versions and compatibilities)
 - Transition of the “EDF DAAC” to the GSFC network domain (hosts and DCE were inaccessible and required some reconfiguration of new addresses)
 - Extensive COTS integration and configuration issues that required continued monitoring and resolution
 - Resolution of final Gateway and ICD issues

Ir1 NCR Summary (Cont.)

NCR Severity Level Definitions:

- **Severity 1 - Catastrophic bug without work around that causes total failure or unrecoverable data loss.**
- **Severity 2 - Bug which severely impairs functionality. Work around might exist but is unsatisfactory.**
- **Severity 3 - Bug that causes failure of noncritical system aspects. There is a reasonably satisfactory work around.**
- **Severity 4 - Bug of minor significance. Work around exists or, if not, the impairment is slight.**
- **Severity 5 - Very minor defect. Work around exists or the problem can be ignored.**

***** Problem *****

NetCDF on the SGI Power Challenge 64 bit mode does not work.

EDS/ARC are in touch w/ NCSA to resolve.

[10/5/95]

Since NetCDF is freeware EDS assumes no responsibility in tracking this issue.

ARC will track and move this feature to Release A.

Severity for Ir1 was reduced to 5.

***** Resolution *****

Please describe your resolution to this problem:

[Larry 10/12/95]

Move netCDF 64-bit capability to Release A.

[GT 11/16/95]

For CSR note the TK routines that use NetCDF and the fact that they are low priority (AA, CUC, MET).

Other Issues: NCR #1085 (Cont.)

***** CSR_Update (Added 951220 by gtadmor) *****

[LK 12/19/95]

gil, here is an email from ncsa on 64-bit mode and hdf. they claim it works.
we haven't done any verification here because the hdf guys don't have
access to the former spreadf. i'll send craig johnson a note.

the e-mail from NCSA...

FYI, we (Albert Cheng) just compiled and tested our latest version of HDF
library on our Power Challenge machine using the SGI f90 compiler instead
of our usual f77 compiler. It went well and passed all tests. (All these
in the native 64 bit mode).

Albert also wrote a simple Fortran 90 program, testing the SDS interface
(e.g. sfcreate, sfwdata, sfrdata, ...). They all worked correctly.

(Also, Albert tells me that the NAG F90 compiler is not as well-behaved
as the SGI compiler, supporting what you told me last week.)

***** Problem *****

IMSL does not install/compile on SGI PC 64 bit mode.

Looking into vendor assistance (Visual Numerics).

***** Solution_1 (Added 950921 by gtadmor) *****

Basically, we're assuming that ITs will not use 64 bit mode in Ir1.

In that case we shouldn't even try to field it later this year

(wait for Rel. A).

No specific Ir1 req'ts that state 64 bit capability.

Other Issues: NCR #1082 (Cont.)

[EDS]

The 64 bit port will be made available 4th quarter this year or first quarter 1996. I have not gotten specifics on dates from visual numerics. The sales person did not have that information as of last Friday. The current libraries for 32 bit will work on the IRIX 64 bit platform.

***** Resolution *****

Please describe your resolution to this problem:

Issue will be tracked through 4th qtr of 1995, however feature will most likely move to Release A.

[GT 11/16/95]

For CSR document that TKs don't use IMSL hence no impact. Sc algorithms that choose to use IMSL have the option of porting to SGI 64-bit.

***** CSR_Update (Added 951220 by gtadmor) *****

[LK 12/19/95]

i asked carol to find out the time scale for imsl 64-bit version. at her initial inquiry, they were non-committal.
